

SECURE, SCALABLE & MODULAR

THE FOUNDATION OF DIGITAL TRUST

exceet connect BASE is the key element of our vision: A multi-layer security architecture created specifically to match the requirements of modern IoT projects. Rely on our central data hub to make your ideas come true:

SECURE

exceet connect BASE runs certificate and key management processes in the background, without any need for user intervention.

SCALABLE

exceet connect BASE provides a dedicated customer environment that can be distributed to a variety of systems. This prevents any unauthorized external access.

MODULAR

Functionalities can be made exclusively available to individual customers.

FEATURES

- Intelligent connectivity between all electronics components by exceet
- Secure transmission, display and processing of data
- Pre-configured for easy integration into existing systems
- Standard interfaces ensure compatibility with third-party platforms
- Settings re alarming, triggers, notification, events
- Integration hub of all exceet connect modules for wider range of functions

CLIENT BENEFITS

- Simple start to device connectivity
- No programming skills required
- Investment security thanks to modular design
- Grows in tandem with client needs
- Expandable by additional functions

FLEXIBLE AND MULTI-COMPATIBLE

For data exchange purposes, we rely on well-established and proven standards such as MQTT, secured via TLS 1.2. Therefore, **exceet connect BASE** is compatible with other software providers and free implementation environments. Functionalities of customer-specific devices can easily be virtualized on the platform.

USER-FRIENDLY

A lucid, minimalistic user interface and a consistent look and feel from Business Connector to Frontend Designer to Desktop Client ensure that **exceet connect BASE** is a cinch in day-to-day use.

BUSINESS CONNECTOR

IoT business cases can be configured easily via drag 'n' drop, making them especially meaningful and clear. No programming skills required.

FRONTEND DESIGNER

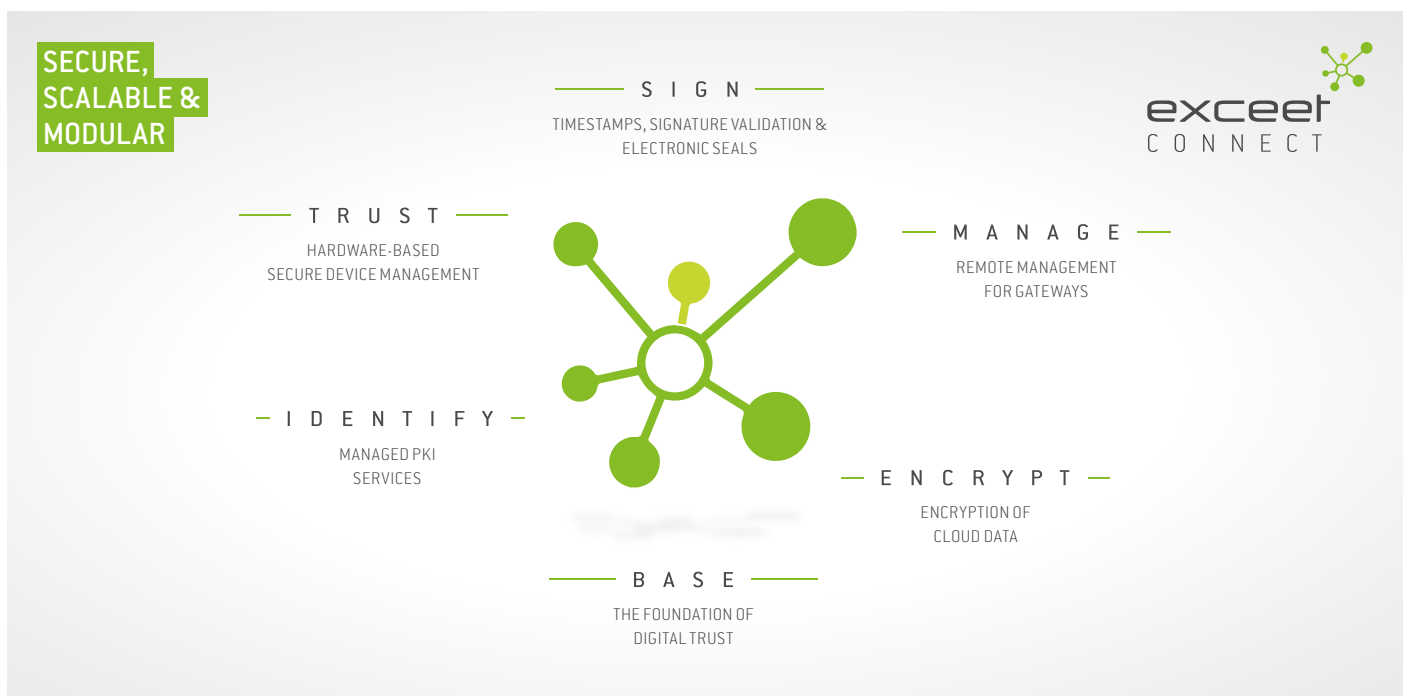

Permits easy creation of web-based user interfaces using pre-defined building blocks.

DESKTOP CLIENT

Enables access to local resources from Windows, OSX and Linux; password protection as required.

RETROFIT-READY

exceet connect BASE is retrofit-ready. This means that legacy hardware can be integrated with ease. MQTT over Websocket also permits integration via legacy networks – without configuration changes.

About exceet

Create Digital Trust - exceet Secure Solutions builds trust in a digital world. As a member of exceet Group, we deliver secure, connected electronics solutions that drive our clients' digital business models. We bundle hardware and software to create perfectly tuned end2end solutions that offer long-term investment security.
